#### 1.0 SCHOOL OF ELECTRICAL AND ELECTRONIC ENGINEERING

http://ee.eng.usm.my

#### 1.1 INTRODUCTION

Since the academic session of 2000/2001, the School of Electrical and Electronic Engineering offers two study programmes, i.e., the Electronic Engineering Programme leading to the Bachelor of Engineering (Honours) (Electronic Engineering) and Electrical Engineering Programme leading to the Bachelor of Engineering (Honours) (Electrical Engineering). As of 2002/2003, another programme has been offered, which is the Mechatronic Engineering Programme leading to the Bachelor of Engineering (Honours) (Mechatronic Engineering). The duration of the three mentioned programmes are four years or eight semesters.

Starting Academic Session 2021/2022, the three programmes were renamed as Bachelor of Electronic Engineering with Honours, Bachelor of Electrical Engineering with Honours and Bachelor of Mechatronic Engineering with Honours.

#### Electronic Engineering

The Electronic Engineering Programme covers Microelectronics, Computers, Communications and Control and Automation.

#### Microelectronics:

- includes Design and Analysis of Electronic Circuits, Digital Systems Design, Semiconductors, Electronic Devices and Circuits and various aspects of Integrated Electronics.

#### Computers:

- includes Computer Organization, Computer Networking, Microprocessor Systems Design, Digital Signal Processing and Software Engineering.

#### Communications:

- includes Theory of Communication Systems, Antenna and Propagation, Microwave Engineering, Radar and Satellite Communications.

#### Control and Automation:

- includes Analysis and Design of Control Systems, Robotics and Automation, exposure to automation industrial sector.

#### Electrical Engineering

The Electrical Engineering Programme covers Power Generation (both conventional and unconventional methods), Transmission, Distribution and Consumption, Electrical Machines, Analysis, Design, Applications, Power System Stability, High Voltage Engineering, Renewable Energy, Electrical Instrumentation and Measurement, and Power Electronics.

#### Mechatronic Engineering

The Mechatronic Engineering Programme covers fundamentals of electrical, electronic, mechanical and computer engineering, system and control engineering, mechatronic system and design, sensors and transducers, robotics, machine vision and manufacturing.

#### **1.2 OBJECTIVES AND PHILOSOPHY**

The vision of Universiti Sains Malaysia is: -"Transforming Higher Education for a Sustainable Tomorrow"

The mission of Universiti Sains Malaysia is: -

"USM is pioneering, transdisciplinary research intensive university that empowers future talents and enables the bottom billions to transform their socio-economic well-being"

The mission of the School of Electrical and Electronic Engineering is: -

"To provide quality education and sustainable research that produces professionals with the necessary knowledge, skills and character that is required for the advancement of engineering and technology".

In line with these vision and missions, the offering of the Electronic, Electrical and Mechatronic Engineering programmes were designed to produce Electrical, Electronic and Mechatronic engineers with professional qualifications, skilled and knowledgeable, credible and able to find solutions to various engineering problems through innovative thinking.

Based on this philosophy, the goals of the curriculum of every study programme have been designed to fulfil the national agenda, as well as industrial and current technological advancement needs. Hence, the curriculum has been organized to possess the following characteristics:

- recognized by Board of Engineers Malaysia (BEM), The Institution of Engineers Malaysia (IEM) as well as to be internationally acclaimed
- proper and balanced integration of practical and theoretical aspects
- with a complete choice of many well planned and advanced specialisations
- to develop persons of sound character who are knowledgeable, competent and innovative

With the above characteristics, USM graduates will become graduate engineers of excellence, calibre and able to achieve the high level of professionalism as engineers or researchers in their respective fields.

#### **1.3** IMPLEMENTATION OF OUTCOME BASED EDUCATION (OBE)

Starting from the 2006/2007 academic session, the new intake of students will undergo a set of curriculum known as Outcome Based Education. Briefly, OBE is a method of curriculum design and teaching that focuses on what students can actually do after they are taught.

Under OBE, there are three Programme Educational Objectives (PEOs) as follows: -

#### Bachelor of Electronic Engineering with Honours

- 1. Graduates who are employed in the Electronic Engineering related fields.
- 2. Graduates who are innovative, pursue continuous career development, and participate in society related activities.
- 3. Graduates who have leadership qualities, ethical values and awareness in sustainability issues.

#### Bachelor of Electrical Engineering with Honours

- 1. Graduates who are employed in the Electrical Engineering related fields.
- 2. Graduates who are innovative, pursue continuous career development, and participate in society related activities.
- 3. Graduates who have leadership qualities, ethical values and awareness in sustainability issues

#### Bachelor of Mechatronic Engineering with Honours

- 1. Graduates who are employed in the Mechatronic Engineering related fields.
- 2. Graduates who are innovative, pursue continuous career development, and participate in society related activities.
- 3. Graduates who have leadership qualities, ethical values and awareness in sustainability issues.

Also under the OBE, each programme should have Programme Outcomes (POs) that describe what students are expected to know and be able to perform or attain by the time of graduation. The School is adopting the POs as stated by Washington Accord and Engineering Accreditation Council in its EAC Standard 2020 as follows:-

#### PO1- Engineering Knowledge

Ability to apply knowledge of mathematics, natural science, engineering fundamentals and an engineering specialisation as specified in WK1 to WK4 respectively to the solution of complex engineering problems.

#### **PO2-** Problem Analysis

Ability to identify, formulate, conduct research literature and analyse complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences (WK1 to WK4).

#### **PO3- Design/Development of Solutions**

Ability to design solutions for complex engineering problems and design systems, components or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal and environmental considerations (WK5).

#### **PO4-** Investigation

Ability to conduct investigation of complex problems using research-based knowledge (WK8) and research methods including design of experiments, analysis and interpretation of data, and synthesis of information to provide valid conclusions.

#### **PO5-** Modern Tool Usage

Ability to create, select and apply appropriate techniques, resources and modern engineering and IT tools, including prediction and modelling, to complex engineering problems, with an understanding of the limitations (WK6).

#### PO6- The Engineer and Society

Ability to apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice and solutions to complex engineering problems (WK7).

#### **PO7-** Environment and Sustainability

Ability to understand and evaluate the sustainability and impact of professional engineering work in the solutions of complex engineering problems in societal and environmental contexts (WK7).

#### **PO8** – Ethics

Ability to apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice (WK7).

#### PO9- Individual and Team Work

Ability to function effectively as an individual, and as a member or leader in diverse teams and in multidisciplinary settings.

#### **PO10-** Communication

Ability to communicate effectively on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

#### **PO11- Project Management and Finance**

Ability to demonstrate knowledge and understanding of engineering and management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

#### **PO12-** Life Long Learning

Ability to recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

#### 1.4 MAIN ADMINISTRATIVE STAFF

Professor Ir. Ts. Dr. Shahrel Azmin bin Sundi @ Suandi Dean

Assoc. Prof. Ir. Dr. Rosmiwati binti Mohd Mokhtar Deputy Dean (Academic, Career and International)

Assoc. Prof. Dr. Muhammad Nasiruddin Mahyuddin Deputy Dean (Research, Innovation and Industry-Community Engagement)

Assoc. Prof. Dr. Haidi bin Ibrahim Programme Chairman (Electronic Engineering)

Assoc. Prof. Ir. Dr. Mohamad Kamarol bin Mohd Jamil Programme Chairman (Electrical Engineering)

Assoc. Prof. Dr. Khoo Bee Ee Programme Chairman (Mechatronic Engineering)

Dr. Mohd Nazri bin Mahmud Programme Chairman (Mix Mode Postgraduate Programme)

Assoc. Prof. Dr. Dzati Athiar binti Ramli Programme Chairman (Quality & Commercialisation)

Mr. Samsuri bin Musa Senior Assistant Registrar

Mdm. Nur Husna binti Mansor Senior Assistant Registrar

#### 1.5 LIST OF ACADEMIC STAFF

| Name  | Tel. Ext | E-mail           |
|---|----------|------------------|
| PROFESSORS                                    |          |                  |
| Faisal Rafiq bin Mahamd Adikan, Dato' Dr.     | 6085     | rafiq@usm.my     |
| Mohd Fadzil bin Ain, Ir. Dr.                  | 5815     | eemfadzil@usm.my |
| Mohd Rizal bin Arshad, Ir. Ts. Dr.            | 6015     | eerizal@usm.my   |
| Nor Ashidi bin Mat Isa, Ir. Dr.               | 6051     | ashidi@usm.my    |
| Shahrel Azmin bin Sundi @ Suandi, Ir. Ts. Dr. | 6000     | shahrel@usm.my   |
| Widad binti Ismail, Dr.                       | 6050     | eewidad@usm.my   |

#### ASSOCIATE PROFESSORS

| Bakhtiar Affendi bin Rosdi, Dr.                | 6083 | eebakhtiar@usm.my   |
|--|------|---------------------|
| Dahaman bin Ishak, Ir. Dr.                     | 5810 | dahaman@usm.my      |
| Dzati Athiar binti Ramli, Dr.                  | 6028 | dzati@usm.my        |
| Haidi bin Ibrahim, Dr.                         | 5822 | haidi@usm.my        |
| Junita binti Mohamad Saleh, Dr.                | 6027 | jms@usm.my          |
| Khoo Bee Ee, Dr.                               | 6032 | beekhoo@usm.my      |
| Mohamad Kamarol bin Mohd Jamil, Ir. Dr.        | 6064 | eekamarol@usm.my    |
| Mohamad Khairi bin Ishak, Dr.                  | 5737 | khairiishak@usm.my  |
| Mohd Fadzli bin Mohd Salleh, Dr.               | 6058 | fadzlisalleh@usm.my |
| Muhammad Nasiruddin bin Mahyuddin, Dr.         | 5843 | nasiruddin@usm.my   |
| Nor Asiah binti Muhamad, Ir. Dr.               | 5726 | norasiah.m@usm.my   |
| (on secondment to other agency)                | 5720 | norasian.m@usin.my  |
| Nor Muzlifah binti Mahyuddin, Dr.              | 5789 | eemnmuzlifah@usm.my |
| Nur Syazreen binti Ahmad, Dr.                  | 6014 | syazreen@usm.my     |
| Patrick Goh Kuan Lye, Dr.                      | 6033 | eepatrick@usm.my    |
| Rosmiwati binti Mohd Mokhtar, Ir. Dr.          | 6003 | eerosmiwati@usm.my  |
| Syed Sahal Nazli Alhady bin Syed Hassan, Dr.   | 6019 | sahal@usm.my        |
| Teh Jiashen, Ir. Ts. Dr.                       | 6016 | jiashenteh@usm.my   |
| Wan Mohd Yusof Rahiman bin Wan Abdul Aziz, Dr. | 6024 | wanrahiman@usm.my   |
| Zaini binti Abdul Halim, Dr.                   | 6061 | zaini@usm.my        |
| Zuraini binti. Dahari, Dr.                     | 6048 | eezuraini@usm.my    |

#### SENIOR LECTURERS

| Abdul Sattar bin Din, Dr.              | 5796 | sattar@usm.my        |
|--|------|----------------------|
| Aeizaal Azman bin Abdul Wahab, Dr.     | 5762 | aeizaal@usm.my       |
| Ahmad Nazri bin Ali, Dr.               | 6020 | nazriali@usm.my      |
| Intan Sorfina binti Zainal Abidin, Dr. | 5795 | intan.sorfina@usm.my |

| Mohamad Adzhar bin Md Zawawi, Dr.              | 6052 | adzhar@usm.my         |
|--|------|-----------------------|
| Mohamad Tarmizi bin Abu Seman, Ir. Dr.         | 6063 | mohdtarmizi@usm.my    |
| Mohamed Fauzi bin Packeer Mohamed, Dr.         | 6097 | fauzi.packeer@usm.my  |
| Mohamed Salem Mohamed Othman, Dr.              | 5842 | salemm@usm.my         |
| Mohd Khairunaz bin Mat Desa, Dr.               | 5873 | khairunaz@usm.my      |
| Mohd Nazri bin Mahmud, Dr.                     | 6059 | nazriee@usm.my        |
| Mohd Shahrimie bin Mohd Asaari, Dr             | 6086 | mohdshahrimie@usm.my  |
| Mohd Tafir bin Mustaffa, Dr.                   | 6029 | tafir@usm.my          |
| Muhammad Firdaus bin Akbar Jalaludin Khan, Dr. | 6087 | firdaus.akbar@usm.my  |
| Muhammad Najwan bin Hamidi, Dr.                | 6018 | najwan@usm.my         |
| Muhammad Hafeez bin Mohamed Hariri, Ir. Dr.    | 6054 | muhammadhafeez@usm.my |
| Noramalina binti Abdullah, Dr.                 | 6022 | eenora@usm.my         |
| Nor Azlin binti Ghazali, Dr.                   | 5786 | azlin.ghazali@usm.my  |
| Nor Rizuan bin Mat Noor, Dr.                   | 6077 | nrmn@usm.my           |
| Nur Zatil 'Ismah binti Hashim, Dr.             | 6034 | zatil.hashim@usm.my   |
| Ooi Chia Ai, Dr.                               | 6076 | chia.ai@usm.my        |
| Tay Lea Tien, Dr.                              | 6082 | tay@usm.my            |
| Teoh Soo Siang, Ir. Dr.                        | 6081 | eeteoh@usm.my         |
| Wan Amir Fuad Wajdi bin Othman, Dr.            | 6062 | wafw_othman@usm.my    |

#### ACADEMIC FELLOWS

| Gomesh Nair A/L Shasidharan, Ir. Dr. | 5813 | gomesh@usm.my        |
|--------------------------------------|------|----------------------|
| Siti Fatimah binti Abd. Rahman, Dr.  | 6079 | fatimahrahman@usm.my |

#### **RESEARCH OFFICERS**

| Mohamad Nazir bin Abdullah, Mr. | 5802 | eemnazir@usm.my  |
|---------------------------------|------|------------------|
| Mohd Nadzri bin Mamat, Mr.      | 5801 | eenadzri@usm.my  |
| Roslina binti Hussin, Mdm.      | 6025 | eeroslina@usm.my |
| Suardi bin Kaharuddin, Mr.      | 6057 | suardi@usm.my    |

#### 1.6 COURSE CODE

Each course offered by the respective School is denoted by the following code of ABC 123/4. The alphabets and numbers represent:-

#### **1.7 PROGRAMME STRUCTURE**

The Structure of the Engineering Degree Programme is as follows:-

| Course   | Units                      | Remarks   |
|--|----------------------------|---|
| (i) CORE   | 108                        |   |
| (ii) ELECTIVE  | 12                         | Students may select these courses from the list as determined by the respective school  |
| (iii)UNIVERSITY REQUIREMENT<br>Compulsory (14 units)   | 15                         |   |
| <ul> <li>(a) Bahasa Malaysia</li> <li>(b) English Language</li> <li>(c) Philosophy and Current Issues</li> <li>(d) Appreciation of Ethics and Civil Civilisations</li> <li>(e) Core Entrepreneurship</li> <li>(f) Co-curriculum</li> </ul> | 2<br>4<br>2<br>2<br>2<br>2 | For international students, courses Appreciation<br>of Ethics and Civilisations and Core<br>Entrepreneurship are to be replaced by<br>Malaysian Studies (4 units) |
| Optional Course (1 Units)<br>(a) Optional  | 1                          |   |

Note: For graduation, students are required to complete at least 135 units, with 'pass' grade for all the courses.

#### 1.8 COURSE OFFERING

Students are required to register for the undergraduate courses in two semesters for each academic session that is Semester 1 and Semester 2. Courses are offered and examined in the same semester. Courses offered are categorized into four levels, via levels 100, 200, 300 and 400, suitable to the requirements of a four-year study programme.

#### **Core Courses**

Core course is a compulsory course package which aims at giving a deeper understanding of an area of specialization major. Students need to accumulate 108 units of the core courses which have been identified by each school.

#### **Elective Courses**

Students need to accumulate no less than 12 units from the list of courses suggested and acknowledged by the school.

#### **Optional Courses**

Optional courses are courses chosen by the students from among those that are outside of their programmes of study.

The main objective of an Optional course is as a substitute course for students who do not take Co-curriculum courses or Skill/Analysis courses.

#### Audit Courses

In principle, the university allows students to register for any courses on an audit basis for the purpose of enhancing the students' knowledge in specific fields during the duration of their study. However, the units of any such audit courses will not be taken into consideration for graduation purposes.

The registration procedures for courses on an audit basis are as follows:-

- (a) Students can register for courses on an audit basis for the purpose of augmenting his/her knowledge in specific fields. Registration for the said course must be within the course registration week.
- (b) Only students of active status are allowed to register for courses on an audit basis.
- (c) Courses registered for on an audit basis are designated as code 'Y' courses. This designation will be indicated on the relevant academic transcript. A space at the bottom of the academic transcript will be reserved for listing the courses registered for on an audit basis.
- (d) Courses registered for on an audit basis will not be taken into consideration in determining the minimum and maximum units of courses registered for.
- (e) Students must fulfil all course requirements. Student who register for courses on an audit basis, are not obligated to sit for any examinations pertaining to that course. A grade 'R' will be awarded irrespective as to whether the student had or had not sat for the examination.

#### Laboratory Work/Practical, Engineering Practice and Industrial Training

Programmes in the School of Engineering place a great emphasis on laboratory work/practical. Laboratory work/practical is an important and essential aspect in most courses. There are also courses that the assessment is based on 100% works in laboratory work/practical. It aims to provide students with a better understanding of the subject matter delivered through lectures.

Students are required to submit laboratory/practical reports which are part of the course work assessment for courses delivered through lectures and the laboratory/practical component only. Attendance is compulsory for all levels of study and students may be barred from taking the written examination if their attendance is unsatisfactory.

Apart from attending classes (lectures and laboratory/practical), students must also undergo the Engineering Practice Course and Industrial Training.

#### **General Objectives of Engineering Practice**

- (a) To expose to the students about the importance and the link between the theoretical and practical aspects of engineering, and to familiarise them with the environment/theoretical situations in use, available resources and their scarcity so that the academic aspects of a course can be understood better and used more effectively.
- (b) To raise awareness of the environment/industrial situations, practices, resources and their scarcity. Therefore, students will have the opportunity to equip themselves to face future challenges in their academic studies as well as in their future training.

The Engineering Practice will be conducted in the following manner:

The training will be conducted on and off campus. There are two levels which are compulsory for all engineering students:

#### (i) <u>Engineering Practice Course</u>

The Engineering Practice Course is a basic training course on mechanical, manufacturing and electrical engineering. The training includes engineering workshops, introduction to manufacturing processes and electrical circuit. Engineering students will also be exposed to methods of engineering planning and project implementation. The duration of the training is 14 weeks and during this period, students will be supervised by the academic staff on duty.

#### (ii) Industrial Training

This course is conducted over 10 weeks during the long break after Semester II at level 300. Students are exposed to the actual operations of industries, locally and abroad. It is hoped that students will be able to learn and experience useful knowledge and skills while undergoing training as they have already taken the Engineering Practice Course.

It is hoped that the training will provide students with a good foundation in engineering. This is a 5-unit course and students will be awarded a Pass/Fail grade upon completion

#### **1.9 GRADUATION REQUIREMENTS**

Starting from the Academic Session 2015/2016, the intakes of this session for all programmes offered by the School of Electrical and Electronic Engineering are required to obtain a minimum of Grade C for each course taken.

Students must also fulfil the following requirements to graduate:

- (a) Fulfil the minimum residential requirement (8 semesters) during the course of studies.
- (b) Fulfil all the credit requirements of the courses and required units for each component (Core, Elective, Option and University Courses).
- (c) Obtain an overall CGPA of 2.00 and above for Core courses.
- (d) Obtain an overall CGPA of 2.00 and above for all courses.
- (e) Achieve a minimum grade C or a grade point of 2.00 for all University Requirement Courses.

#### 1.10 EXAMINATION SYSTEM

Examinations are held at the end of every semester. Students have to sit for the examination of the courses they have registered for except for courses with 100% coursework. Students are required to settle all due fees and fulfil the standing requirements for lectures/tutorials/practical and other requirements before being allowed to sit for the examination of the courses they have registered for. Course evaluation will be based on the two components of coursework and final examinations. Coursework evaluation includes tests, essays, projects, assignments and participation in tutorials.

#### **1.10.1 Duration of Examination**

| <b>Evaluated Courses</b> | Examination Duration                    |
|--------------------------|---|
| 2 units                  | 1 hour for coursework of more than 40%  |
| 2 units                  | 2 hours for coursework of 40% and below |
| 3 units or more          | 2 hours for coursework of more than 40% |
| 3 units or more          | 3 hours for coursework of 40% and below |

#### **1.10.2** Barring from Examination

Students will be barred from sitting for the final examination if they do not fulfil at least 70% of the course requirements, such as absence from lectures and tutorials, and have not completed/fulfilled the required components of coursework. A grade 'X' would be awarded for a course for which a student is barred. Students will not be allowed to repeat the course during the *Courses During the Long Vacation* (KSCP) period.

#### 1.10.3 Grade Point Average System

Students' academic achievement **for registered core**, **elective and university requirement courses** will be graded as follows:

| Alphabetic<br>Grade | А    | A-   | B+   | В    | B-   | C+   | С    | C-   | D+   | D    | D-   | F |
|---------------------|------|------|------|------|------|------|------|------|------|------|------|---|
| Grade<br>Points     | 4.00 | 3.67 | 3.33 | 3.00 | 2.67 | 2.33 | 2.00 | 1.67 | 1.33 | 1.00 | 0.67 | 0 |

Students who obtained a grade 'C-' and below for a particular course would be given a chance to improve their grades by repeating the course during the KSCP (see below) or normal semester. Students who obtained a grade 'C' and above for a particular course are not allowed to repeat the course whether during KSCP or normal semester.

The achievement of students in any semester is based on Grade Point Average (GPA) achieved from all the registered courses in a particular semester. GPA is the indicator to determine the academic performance of students in any semester.

CGPA is the Cumulative Grade Point Average accumulated by a student from one semester to another during the years of study.

The formula to compute GPA and CGPA is as follows:

Grade Point Average = 
$$\frac{\sum_{i=1}^{n} U_i M_i}{\sum_{i=1}^{n} U_i}$$

where:

| п     | = | Number of courses taken         |
|-------|---|---------------------------------|
| Ui    | = | Course units for course i       |
| $M_i$ | = | Grade point for course <i>i</i> |

Example of calculation for GPA and CGPA:

|            | Course  | Unit | Grade Point<br>(GP) | Grade (G) | Total GP |
|------------|---------|------|---------------------|-----------|----------|
| Semester I | ABC XX1 | 4    | 3.00                | В         | 12.00    |
|            | ABC XX2 | 4    | 2.33                | C+        | 9.32     |
|            | BCD XX3 | 3    | 1.67                | C-        | 5.01     |
|            | CDE XX4 | 4    | 2.00                | С         | 8.00     |
|            | EFG XX5 | 3    | 1.33                | D+        | 3.99     |
|            | EFG XX6 | 2    | 2.67                | B-        | 5.34     |
|            |         | 20   |                     |           | 43.66    |

 $GPA = \frac{43.66}{20} = 2.18$ 

|             | Course  | Unit | Grade Point<br>(GP) | Grade (G ) | Total GP |
|-------------|---------|------|---------------------|------------|----------|
| Semester II | ABC XX7 | 3    | 1.00                | D          | 3.00     |
|             | ABB XX8 | 4    | 2.33                | C+         | 9.32     |
|             | BBC XX9 | 4    | 2.00                | С          | 8.00     |
|             | BCB X10 | 4    | 2.67                | B-         | 10.68    |
|             | XYZ XX1 | 3    | 3.33                | B+         | 9.99     |
|             |         | 18   |                     |            | 40.99    |

 $GPA = \frac{40.99}{18} = 2.28$ 

 $CGPA = \frac{\text{Total Accumulated GP}}{\text{Total Accumulated Unit}} = \frac{43.66 + 40.99}{20 + 18} = \frac{84.65}{38} = 2.23$ 

From the above examples, the CGPA is calculated as the total grade point accumulated for all the registered courses and divided by the total number of the registered units.

#### 1.10.4 Courses During the Long Vacation (Kursus Semasa Cuti Panjang) (KSCP)

KSCP is offered to students who have taken a course earlier and obtained a grade of 'C-', 'D+', 'D', 'D-', 'F' and 'DK' only. Students who obtained a grade 'X' or 'F\*' are not allowed to take the course during KSCP.

The purpose of KSCP is to:

- 1. Give an opportunity to students who are facing time constraints for graduation.
- 2. Assist students who need to accumulate a few more credits for graduation.
- 3. Assist probationary students to enhance their academic status.
- 4. Assist students who need to repeat a prerequisite course, which is not offered in the following semester.

However, this opportunity is only given to students who are taking courses that they have attempted before and achieved a grade as stipulated above, provided that the course is being offered. Priority is given to final year students. Usually, formal lectures are not held, and teaching is via tutorials.

The duration of KSCP is 3 weeks, i.e. 2 weeks of tutorial and 1 week of examination, all held during the long vacation. The KSCP schedule is available on the University's Academic Calendar.

#### The Implementation of KSCP

(i) Students are allowed to register for a maximum of 3 courses and the total number of units registered must not exceed 10.

(ii) Marks/grades for coursework are taken from the highest marks/the best grades obtained in a particular course in the normal semester before KSCP. The final overall grade is determined as follows:

#### Final Grade = The best coursework marks or grade + Marks or grade for KSCP examination

(iii) GPA calculation involves the **LATEST** grades (obtained in KSCP) and also involves courses taken in the second semester and those repeated in KSCP. If the GPA during KSCP as calculated above is 2.00 or better, the academic status will be active, even though the academic status for the second semester was probation status. However, if the GPA for KSCP (as calculated above) is 1.99 or below, the academic status will remain as probation status for the second semester.

(iv) Graduating students (those who have fulfilled the graduation requirements) in the second semester are not allowed to register for KSCP.

#### 1.10.5 Academic Status

<u>Active Status</u>: Any student who achieves a GPA of 2.00 and above for any examination in a semester will be recognised as ACTIVE and be allowed to pursue his/her studies for the following semester.

<u>Probation Status</u>: A probation status is given to any student who achieves a GPA of 1.99 and below. A student who is under probation status for three consecutive semesters (P1, P2, FO) will not be allowed to pursue his/her studies at the university. On the other hand, if the

CGPA is 2.00 and above, the student concerned will be allowed to pursue his/her studies and will remain at P2 status.

#### 1.10.6 Termination of Candidature

Without any prejudice to the above regulations, the University Examination Council has the absolute right to terminate any student's studies if he/she does not fulfil the accumulated minimum credits.

The University Examination Council has the right to terminate any student's studies due to certain reasons (a student who has not registered for the courses, has not attended the examination without valid reasons), as well as medical reasons can be disqualified from pursuing his/her studies.

#### 1.10.7 Examination Results

Full results (with grade) will be announced by the University through the Campus Online portal (campusonline.usm.my) after the School Examination Council meeting which is approximately one month after the final examination.

Students can print their official semester results document namely 'SEMGRED' through the Campus Online portal (campusonline.usm.my) on the same day/date of the results announcement.

#### 2.0 ELECTRONIC ENGINEERING PROGRAMME

#### 2.1 BACHELOR OF ELECTRONIC ENGINEERING WITH HONOURS STRUCTURE 2023/2024

#### 2.2 COURSE – PROGRAM OUTCOME MATRIX (ELECTRONIC ENGINEERING)

#### 3.0 COURSE DESCRIPTION

#### 3.1 LEVEL 100

| Codes    | Courses                                  | Synopsis  |
|----------|--|---|
| EEE105/3 | Circuit Theory I                         | This course is teaching the fundamental of electric circuit and its analysis for DC and AC systems which comprises of topics such as Circuit Variables and Elements, Resistive Circuits, Techniques of Circuit Analysis, Inductance and Capacitance, First-Order Response of RL and RC Circuits, Sinusoidal Steady-State Analysis, AC Power Analysis and Three Phase Circuit.   |
| EEE123/3 | Computer<br>Programming for<br>Engineers | This course is fundamental not only to computer-related subjects but also to other subjects that require complex calculations and computer simulations. It exposes students to organization of computer, step-by-step procedures, programming terminologies and program commands that are required in solving engineering problems based on computer program using C++ programming language.                            |
| EEE125/3 | Basic Circuit<br>Laboratory              | This course comprises of 13 experiments that will be conducted by the students.<br>The experiments are on multimeter applications, the measurement of voltage,<br>current and resistance in a dc circuit, oscilloscope and function generator,<br>transformer, capacitor, inductor and power measurement in ac circuits,<br>superposition, Thevenin and Norton theorems, diode in series and parallel<br>configuration. |
| EEE130/3 | Digital Electronic I                     | This course covers digital electronic systems, major logic devices, and combination and sequential logic circuits.  |
| EEE131/3 | Semiconductor Devices                    | This course provides basic concepts necessary to understand the fundamentals of semiconductor devices. It covers knowledge on semiconductor materials and physics, and provide insights on the operation of semiconductor devices such as P-N junction diodes, Bipolar Junction Transistors (BJTs) and Field-Effect Transistors (FETs).   |
| EEL102/2 | Engineering Practice                     | This course is divided into three components. The components are on the skill/technique on how to use PSpice and OrCAD software in simulation/design the electrical and electronic circuitry and fabrication technique for PCB. Domestic wiring and basic welding process are exposed to equip students with fundamental engineering skill.   |
| EBB113/3 | Engineering Materials                    | This course deals with the different engineering materials (metals, ceramics, polymers, composites), as well as the various kinds of properties exhibited by these materials which intended to equip the students with necessary knowledge on materials science and engineering.  |
| EMM101/3 | Engineering Mechanics                    | This course is an introduction to the mechanics of rigid bodies. It is divided into<br>two areas: Statics and Dynamics. In Statics, the student will learn the fundamental<br>concepts and principles of rigid bodies in equilibrium. In Dynamics, the student<br>will learn the fundamental concepts and principles of the accelerated motion of a<br>body (a particle).   |
| EUM113/3 | Engineering Calculus                     | This course reviews the topics on calculus of one and multivariable. It also covers<br>the topics of solutions of ordinary differential using analytical and numerical<br>methods.  |
| EUM114/3 | Advanced Engineering<br>Calculus         | This course covers the topics on linear algebra, Fourier series, partial differential equations, and vector calculus. Numerical techniques for solving systems of linear equations and partial differential equations are also given.   |

#### 3.2 LEVEL 200

| Codes    | Courses                            | Synopsis  |
|----------|------------------------------------|---|
| EEE208/3 | Circuit Theory II                  | This course covers techniques for analyzing electrical circuits, including the topics of mutual inductance, frequency response for AC circuits, Laplace transform, Fourier series and Fourier transforms, and two port circuits.  |
| EEE226/3 | Microprocessor I                   | Introducing fundamental architecture and programming of microprocessor and microcontroller. That understanding can be used to build a simple application using the microprocessor and microcontroller   |
| EEE228/3 | Signal and System                  | This subject gives exposure to students to learn the fundamental of signals and systems from mathematical modeling, analyses methods of analog and digital systems, sampling and modulation processes. In addition, this course also covers the knowledge, analysis and the applications of Fourier systems and Z transform.  |
| EEE231/3 | Digital Electronics<br>Laboratory  | The course (lab) is divided into 2 modules which are based on the course EEE130 – Digital Electronic I. The first module concentrates on the basic of digital electronics which includes Logic Gate ICs and troubleshooting, Counters, Multiplexers, Flip-Flop, Triggers, Registers and Combinational Logic. The outcome of the first module is to enable students to understand and design simple and basic digital circuits. The knowledge will then be used in the second module where students will be given the tasks on designing more complex combinational and sequential circuits. |
| EEE236/2 | Complex Analysis for<br>Engineers  | This course reviews the topics on complex number, complex function, analytic function, complex differentiation and integration, series expansion and Residue Theorem, as well as complex conformal mapping.   |
| EEE243/3 | Analogue Electronics<br>Laboratory | This course comprises of 14 experiments that will be conducted by the students.<br>The experiments are on Diode, BJT, FET, Op-amp, Power Amplifier, filters and<br>rectifiers as well as their applications.  |
| EEE244/4 | Analogue Electronics I             | This course emphasizes on the analysis of single and multi-stage amplifiers.  |
| EEE270/3 | Analogue Electronics II            | This course emphasizes on the analysis and design of amplifiers and its frequency response.   |
| EEE276/3 | Electromagnetic Theory             | This course deals with the theory and analysis of transmission line and electromagnetic for electrostatics, magnetostatics and dynamic (time-varying). It also covers the properties of plane wave propagation and electromagnetics application in system design, including the concept of electromagnetic interference (EMI) and electromagnetic compatibility (EMC).  |
| EEK241/3 | Electrical Power<br>Technology     | This course is offered for students to learn and understand basic principles of electrical power technology such as single-phase and three-phase ac network, electric power generation, power transmission and distribution, power measurements and instrumentation, protection systems, and alternatives energy sources  |

#### 3.3 LEVEL 300

| Codes    | Courses   | Synopsis   |
|----------|---|--|
| EEE301/4 | Semiconductor Device<br>Test and Measurement    | This course provides understanding of semiconductor device test and<br>measurement fundamentals. Among contents are introduction to test system, test<br>specification and flow design, DC test, AC test, digital and mixed signal test and<br>test data analysis. Practical aspect using tester hardware will be included through<br>laboratory work and projects.  |
| EEE303/4 | Data Communication &<br>Networking              | This course offers students to learn the concepts of data communications, data-link layer protocols, MAC layer protocols and network topologies.   |
| EEE304/4 | Digital Integrated<br>Circuit Design            | This course is designed to provide the IC design basics, levels, strategies, and methods. Subsequently incorporating this knowledge along with the ability to encapsulate the use of EDA design tools and SystemVerilog in the digital electronic design application.  |
| EEE305/4 | Microwave Engineering                           | This course provides the introduction, comprehension, application and analysis of RF and Microwave Concept and uses S-parameter Network and other networks. It also includes the introduction on understanding and design of transistor circuit and passive components, filters, amplifiers, microwave source, mixers, antennas and microwave propagation.   |
| EEE320/3 | Microprocessor II                               | Introducing fundamental architecture, programming and interfacing of microprocessor/microcontroller with external devices. Basic knowledge acquired will enable students to build simple applications of embedded systems.   |
| EEE332/4 | Communications                                  | This course is offered to provide fundamental knowledge on transmission of<br>analogue and digital information, characteristic of signal sources and the concept<br>of communication channel such as bandwidth. Analogue modulation technique<br>such as AM, FM and PM will be emphasized followed by the noise in<br>communication systems. Introduction on data transmission for digital<br>communication systems including multiplexing and binary modulation such as<br>ASK, FSK and PSK.  |
| EEE348/3 | Introduction to<br>Integrated Circuit<br>Design | This course provides understanding on integrated circuit fundamentals and design<br>methodologies. The course includes IC design methodology, CMOS technology<br>and fabrication process, semiconductor memories, and digital IC design using<br>Verilog HDL as well as Cadence, Mentor Graphics, and Synopsys EDA software.   |
| EEE349/4 | Embedded System and<br>IoT                      | This course is about designing and developing embedded systems and Internet of<br>Things (IoT). It focuses on embedded platform architecture including platform<br>overview, memory technology, device interface and device interconnect. In device<br>interconnect, Inter-Integrated Circuit, Serial Peripheral interface, Audio Buses,<br>Inter IC Sound and Universal Asynchronous Receiver/transmitter (UART) will be<br>covered. This course also focuses on the existing applications of the IoT. Data<br>from sensors will be processed and displayed by using IoT technology. Standards,<br>protocols and application for IoT will be introduced. Access to the IoT via internet<br>Gateways will be studied. Practical exposure to embedded system and IoT devices<br>and software will be provided via lab assignments and mini-project. |
| EEE350/3 | Control Systems                                 | This course exposes students to transfer functions and mathematical model of physical systems. In addition, students will be exposed to knowledge on dynamics of open and closed-loop systems in time and frequency domain. Students will also be taught analysis techniques and feedback properties of systems.   |

| EEE354/3 | Digital Control System                  | This course gives exposure on sampling concept which is the basis to digital system. Students will learn about open and closed loop systems and how to analyze the systems.   |
|----------|---|---|
| EEE377/4 | Digital<br>Communications               | An introduction to the basic concepts of Parseval power and energy theory for signal analysis, baseband transmission techniques, bit error probability analysis and optical receiver concepts are introduced.   |
|          |   | Passband modulation and demodulation techniques, analysis on bandpass transmission signals in term of the normalized power, and probability of bit error. Concepts of the source and channel codings.   |
| EEE378/3 | Digital Electronic II                   | This course provides understanding to design and analysis of combinational and<br>sequential digital systems. The course includes Logic Simplification, Logic<br>Design Using MSI Components, Logic Design Using Programmable Logic<br>Design, Arithmetic Circuit, Registers & Counters, Finite State Machines (FSM),<br>Multi-Input Multi-Output FSM, FSM Implementation and Algorithmic State<br>Machine (ASM).   |
| EEE379/3 | Computer System &<br>Multimedia         | This course introduces students to the fundamental concepts of personal computer architecture, computer performance, memory system, input/output, operating system, processor structure and function, parallel architecture, multimedia components and the applications of multimedia.  |
| EEE382/3 | Probability &<br>Engineering Statistics | The course covers the topics of probability, discrete, continuous and bivariate probability distributions, confidence intervals and hypothesis testing for mean and between two population means, simple and multiple linear regression, nonlinear regression and nonparametric statistics.   |
| EEL303/5 | Industrial Training                     | Industrial training exposes students to the real world of work as engineers according to their respective specializations. The purpose of this course is to enable students to apply the knowledge learned at the university while adding knowledge about the latest technology.  |
| EEM340/4 | Autonomous System                       | In this course, the student will be introduced to autonomous robotics system<br>including robot features, sensors, application areas and current research into<br>autonomous robotics. Among the topics which will be covered are robotic<br>hardware systems, kinematics and inverse kinematics, sensors, sensor data<br>interpretation and sensor fusion, path planning, configuration spaces, position<br>estimation, intelligent systems, spatial mapping, human-robot Interaction basics,<br>HRI experimentation design, intelligent interaction, multi-agent systems and<br>applications. Robot Operating System (ROS) software will also be used to do the<br>autonomous robotic application simulation. |
| EEM349/4 | Computational<br>Intelligence           | This course involves four main areas in Computational Intelligence, which are<br>Machine Learning, Artificial Neural Network, Artificial Swarm Intelligence and<br>Fuzzy Systems.   |
| EUP222/3 | Engineer in Society                     | This course provides an introduction to the fundamental principles on project and financial management, ethics and laws related to environment and Occupational Safety and Health Act (OSHA), professional practice as well as the 10 commandments of project management. Problem solving through success or failure of actual case studies are reviewed.   |

#### 3.4 LEVEL 400

| Codes    | Courses   | Synopsis   |
|----------|---|--|
| EEE424/3 | Electronic System<br>Design                                       | The course comprises of solving complex engineering problem by designing viable solutions that integrates components in core areas of Electronic Engineering and meeting specific needs with appropriate considerations such as sustainability, public health and safety, society, cultural dan environment issues.  |
| EEE433/3 | Object Oriented<br>Programming for<br>Engineering<br>Applications | This course encompasses object-oriented programming concepts involved in C++ programming language. The learned concepts will be applied to solve engineering problems  |
| EEE437/4 | Digital Signal<br>Processing                                      | This course introduces discrete-time signals and systems ranging from the fundamentals until FIR and IIR digital filter design. The topics covered are signals, systems, discrete-time system, Z-transform, discrete Fourier transform, Fast Fourier Transform, the structure of discrete-time systems, and the design of FIR/IIR digital filters  |
| EEE438/4 | Wireless and Mobile<br>Communications                             | This course offers the topics on wireless channel, basic concept of antenna<br>beamforming, wireless transceiver signal processing, wireless access methods, and<br>wireless communication standards. In addition, the course includes cellular<br>concept, cell interference, capacity enhancement and cell traffic. Important related<br>concepts are introduced, and the necessary analytical techniques are applied to<br>solve wireless and mobile system problems. The application towards standards in<br>the wireless communications are also discussed. |
| EEE445/4 | Analog Integrated<br>Circuit Design                               | This course covers the theory, analysis and realization of the analog integrated circuits focusing on CMOS technology. The analysis of the single stage amplifiers, multiple stage and differential amplifiers with the practical laboratory covering the standard layout (eg gds format).   |
| EEE453/4 | Control System Design   | This course covers the basic concepts of control systems, state-space variables, and state-space modeling of dynamical systems. It also covers design and analysis of control systems using state-space method, system identification, optimal control, and advanced control techniques.   |
| EEE499/6 | Undergraduate Project   | A small scale research project will be undertaken by every final year student. The<br>aim of the project is to train the student to identify some problems related to<br>electronic engineering and introducing them with the techniques of investigation,<br>solving problems, writing a technical report and presentation of the results in the<br>form of thesis and seminar.   |
| EEM426/4 | Big Data Analytics  | The course includes fundamental on technologies in big data storage and processing and also techniques to generate predictive model in big data application. The course provide exposures on the application of Apache Spark and Python to manage and analyze big data for predictive analytics.   |
